More Idaho counties with cases

For May 28, eight of the 38 new confirmed and probable cases statewide were in Franklin County as well as the first case of community transmission in Power County. As of this morning, COVID-19 cases have been reported in 34 of Idaho’s 44 counties.

Resources & Equipment

Sunny model updated with new parameters

If your hospital or hospital system is using PrimeStore™ MTM (PrimeStore Media) or other in-house transport media for COVID-19 samples, you should be aware of the updated model for COVID-19 samples published by the World Health Organization (WHO) this week. The WHO has updated the model to address the needs of front-line clinical staff as well as the storage and transport of samples.

The WHO’s updated model has been developed in collaboration with the World Health Organization’s Global Outbreak Monitoring and Avian and Pandemic Influenza (GLOPIX) Team and the World Health Organization’s (WHO) Department of Microbiology and Pathogenesis.

Surveys & data collection

Quality & Patient Safety

Clinical management guidance

The WHO has recently published a new clinical management guidance for COVID-19 patients. The guidance includes recommendations for managing COVID-19 patients, including those with severe disease. The guidance emphasizes the importance of early identification and treatment of COVID-19 patients. It also highlights the importance of providing appropriate care for patients with severe disease, including ventilatory support and medical stabilization.

The guidance also includes recommendations for managing COVID-19 patients in intensive care units (ICUs). It emphasizes the importance of managing the respiratory system, including ventilation, and the importance of providing appropriate care for patients with severe disease.

The guidance also includes recommendations for managing COVID-19 patients in emergency departments (EDs). It emphasizes the importance of managing the respiratory system, including ventilation, and the importance of providing appropriate care for patients with severe disease.

The guidance also includes recommendations for managing COVID-19 patients in respiratory care units. It emphasizes the importance of providing appropriate care for patients with severe disease, including ventilatory support and medical stabilization.

The guidance also includes recommendations for managing COVID-19 patients in palliative care. It emphasizes the importance of providing appropriate care for patients with severe disease, including ventilatory support and medical stabilization.

The guidance also includes recommendations for managing COVID-19 patients in dental care units. It emphasizes the importance of providing appropriate care for patients with severe disease, including ventilatory support and medical stabilization.

The guidance also includes recommendations for managing COVID-19 patients in mental health care units. It emphasizes the importance of providing appropriate care for patients with severe disease, including ventilatory support and medical stabilization.

The guidance also includes recommendations for managing COVID-19 patients in long-term care facilities. It emphasizes the importance of providing appropriate care for patients with severe disease, including ventilatory support and medical stabilization.

The guidance also includes recommendations for managing COVID-19 patients in home care. It emphasizes the importance of providing appropriate care for patients with severe disease, including ventilatory support and medical stabilization.

The guidance also includes recommendations for managing COVID-19 patients in hospices. It emphasizes the importance of providing appropriate care for patients with severe disease, including ventilatory support and medical stabilization.

The guidance also includes recommendations for managing COVID-19 patients in nursing homes. It emphasizes the importance of providing appropriate care for patients with severe disease, including ventilatory support and medical stabilization.

The guidance also includes recommendations for managing COVID-19 patients in senior centers. It emphasizes the importance of providing appropriate care for patients with severe disease, including ventilatory support and medical stabilization.

The guidance also includes recommendations for managing COVID-19 patients in hospice care providers. It emphasizes the importance of providing appropriate care for patients with severe disease, including ventilatory support and medical stabilization.

The guidance also includes recommendations for managing COVID-19 patients in mental health care providers. It emphasizes the importance of providing appropriate care for patients with severe disease, including ventilatory support and medical stabilization.

The guidance also includes recommendations for managing COVID-19 patients in providers of palliative care. It emphasizes the importance of providing appropriate care for patients with severe disease, including ventilatory support and medical stabilization.

The guidance also includes recommendations for managing COVID-19 patients in providers of long-term care services. It emphasizes the importance of providing appropriate care for patients with severe disease, including ventilatory support and medical stabilization.

The guidance also includes recommendations for managing COVID-19 patients in providers of mental health services. It emphasizes the importance of providing appropriate care for patients with severe disease, including ventilatory support and medical stabilization.

The guidance also includes recommendations for managing COVID-19 patients in providers of hospice care services. It emphasizes the importance of providing appropriate care for patients with severe disease, including ventilatory support and medical stabilization.

The guidance also includes recommendations for managing COVID-19 patients in providers of long-term care facilities. It emphasizes the importance of providing appropriate care for patients with severe disease, including ventilatory support and medical stabilization.

The guidance also includes recommendations for managing COVID-19 patients in providers of mental health care services. It emphasizes the importance of providing appropriate care for patients with severe disease, including ventilatory support and medical stabilization.

The guidance also includes recommendations for managing COVID-19 patients in providers of hospice care services. It emphasizes the importance of providing appropriate care for patients with severe disease, including ventilatory support and medical stabilization.

The guidance also includes recommendations for managing COVID-19 patients in providers of long-term care services. It emphasizes the importance of providing appropriate care for patients with severe disease, including ventilatory support and medical stabilization.

The guidance also includes recommendations for managing COVID-19 patients in providers of mental health services. It emphasizes the importance of providing appropriate care for patients with severe disease, including ventilatory support and medical stabilization.

The guidance also includes recommendations for managing COVID-19 patients in providers of hospice care services. It emphasizes the importance of providing appropriate care for patients with severe disease, including ventilatory support and medical stabilization.

The guidance also includes recommendations for managing COVID-19 patients in providers of long-term care services. It emphasizes the importance of providing appropriate care for patients with severe disease, including ventilatory support and medical stabilization.

The guidance also includes recommendations for managing COVID-19 patients in providers of mental health services. It emphasizes the importance of providing appropriate care for patients with severe disease, including ventilatory support and medical stabilization.
